

# Pallas xtra system

## Demarcation / Welded mesh

The Pallas xtra mesh fencing system is a secure effective form of crime prevention. Enhancing resistance to vandalism and forced entry attempts.

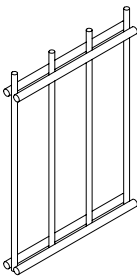

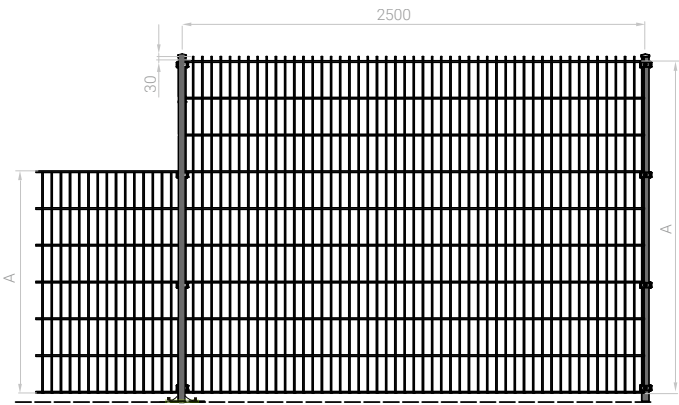

The system benefits from all the same features as the Pallas but incorporate a flat bar and anti-tamper U-clips and bolts for additional security.

Also available with a Perimeter Intrusion Detection System (PIDS) like Pallas xtra SensorFence.

The mesh panels have vertical 6 mm diameter wires supported between two 8 mm diameter horizontal wires (8-6-8 format). Vertical wires are spaced at 50 mm intervals and horizontal wires at 200 mm intervals. The fences have an anti-climb feature where the vertical wires protrude 30 mm through the top horizontal wires.

- **Vertical wires secured between two horizontal wires**
- **Extra secure fence due to flat bar, anti-tamper bolts and three additional U-clips.**
- **2500 mm wide panels available in heights up to 3030 mm**
- **Can be integrated with detection and entrance control options**
- **Option of staggered assembly ( $\pm 200$  mm)**
